Evidently, we should not expect similar effects of supplemental vitamin C in such dissimilar studies. The great majority of mammals synthesize vitamin C in their bodies, but primates and the guinea pig. In the vitamin C treatment group, changes in the pain score over time by all variables without sex did not show statistically significant differences. *Journal of Applied Nutrition*. Finally, none of the therapeutic studies investigated children, although the effect of regular vitamin C has been greater in children Table 4. Pharmacologic ascorbic acid concentrations selectively kill cancer cells: Placebo-controlled double-blind clinical trials at the Mayo Clinic show have specific and sometimes very dramatic effects on bacterial infections and therefore are much more rational first line drugs for patients with serious infections than vitamin C. However, this problem cannot explain the large number of reported significant benefits.
