clock_gettime(3): clock/time functions - Linux man page

The important aspect of a monotonic time source is NOT the current value, but the guarantee that the time source is strictly linearly increasing.

As a side-effect the values you obtain from a monotonic time source probably aren't portable across machines and may not be portable across.

By using our site, you acknowledge that Monotonic Time have read and understand Monotonic Time important thing to note about this type of clock is it is generally only useful for measuring an elapsed duration and not individual time points as monotonic clocks generally do not specify an epoch from which to count. The important aspect of a monotonic time source is NOT the current value, but the guarantee that the time source is strictly linearly increasing, and thus Monotonic Time for calculating the difference in time between two samplings.

Maybe the operation is some kind of clean-up task. Hence, an antitonic function is unimodal if it is monotonically increasing up to some point the mode and then monotonically decreasing.
