Well, they don't follow Highway 35, that's for sure. Simple setup Scientists knew from relatively recent research that the morpho sports simple wing ears. The length of these stages is impacted by the temperature – the cooler it is the longer this process takes.

I am assuming the question is really how long it takes the butterfly to metamorphose. Modeling these arrangements in a computer, the researchers were able to determine how they would have scattered light, which in turn revealed what color they would have. The whole process, from egg to butterfly, takes four weeks. But lurking in the goo are a few butterfly cells that start the action on growing a butterfly.

The overlapping of these scales creates the illusion of other colours, in addition to the blue. The effect of butterflies in a room landing on you is scary. A moth in mid-Cretaceous 99 million years ago Burmese amber.
