Most of his book is merely a summary of what Edward Larson has already written in *Summer for the Gods* and *Trial and Error* although there are a few segments in which he goes beyond Larson to expand on some of the legal ques. Mano Singham, a theoretical nuclear physicist and religious agnostic, has for several years been an outspoken critic of creationism and intelligent design. What science has done is make the god hypothesis unnecessary and undesirable. But the trial did successfully spark a debate that has lasted more than 80 years and simply will not be quelled despite a succession of seemingly definitive court decisions.

My book interweaves this general history of religion in schools with the specific history of the opposition to the teaching of evolution in US classrooms, starting with the Scopes trial in and ending with the intelligent design Dover trial in focusing on how the nature of this opposition has itself evolved as a result of repeated setbacks in the courts. *The Wedge of Intelligent Design* said: *Science Logic and Mathematics*.
