Weitzel writes eloquently and unsentimentally about his experience of Parkinson's disease. Williams' chapter focuses specifically on what he terms transition psychology, which he uses to consider and indeed predict responses to, amongst other things, mass traumas such as natural disasters and terrorist attacks. The author of 10 books, his research has included cross-cultural studies of trauma in veterans; victims of natural disasters; medical conditions, including HIV; and applications of telemedicine in providing access to care for rural and underserved populations.

Each address the nature of personal transitions and the distortions that stress causes. The developmental neurobiology of stress. The objective of this study was to document expectations and perceptions related to personal infertility in a sample of young adults. It is a very helpful book, and it belongs in your collection.
