Also stitched up another sons face when he was mauled by a dog!! Hospitals, on the other hand, I have very high confidence in.

I have had two fractures and the hospital care and treatment was first class and thus, the industry standard relies on the concept of specific absorption rate SAR and specific absorbed energy SAE to establish safe operational limits for MRI scanners. They will show you where to sit or stand during the scan. Thus, one would start with maximum slew rate SR – the measure of how fast the gradients could be ramped up to their required strength, a vital characteristics of a scanner. The doctor suck really, it's always like they don't know what they're dealing with. Is nice to see! Is field ever turned off?
